

The Patient Engagement team at Health Quality Ontario (HQO) is currently conducting an assessment regarding the medical procedure known as ***Selective Dorsal Rhizotomy*** for children with Cerebral Palsy.

The goal of the team is to illuminate the lived-experience of patients and families with CP, their existing therapies, and selective dorsal rhizotomy. Having had the procedure is not necessary – the context around the procedure (what families view as its possibilities/implications/availability) is important as well.

The assessment takes place over the phone and would only be a one-time conversation, lasting around 30-60 minutes, at your convenience.

If you are interested in participating, please contact David Wells at HQO
